

PLATIPUS PIDDLER – TREE IRRIGATION SYSTEM

Water is vital for tree growth and establishment. Insufficient water soon after transplanting whilst the root system is still immature is a major cause of tree mortality. This is particularly true with standards and semi-mature trees, as a 20-25cm girth tree will require 300 litres of water per month.

The Piddler is a newly designed high capacity irrigation system that delivers water directly to the rootzone. It is suitable for trees with 50cm diameter rootball or over.

Piddler benefits include-:

- Efficient, effective delivery of water and air to the tree's root system
- Economic, compact and easy to transport and store
- Quick to assemble and can be cut to fit the exact root ball size
- Debris cap and membrane prevent blockages
- Easy watering with a hose pipe through the debris cap. A hose adaptor is also available to connect a hose thereby increasing pressure and capacity.
- Minimal waste – no run off, evaporation and water escaping from the tree pit

Product	For rootball up to diameter (cm)	Circuit membrane length (metres)	Price per kit
PID0	55	2	£7.00
PID1	90	3	£12.50
PID2	155	5	£16.50
PID3	240	8	£20.50
PID4	310	10	£25.50
Hose Adaptor			£6.00
