### HEAVY DUTY STRIMMER GUARDS

Very effective as it does not ride up stem of tree. Made of tough black plastic they are easily fitted around the base of the tree to form a cone approx 225mm high. Once fitted the guards are virtually vandal-proof. Designed to fit trees up to 15cm diameter at base but for larger trees two guards can be joined up.

The STANDARD cone is for normal use where base of tree is unrestricted for a diameter of 200mm at ground level. The OFFSET cone is for use where the stake is close to the tree and there is insufficient space for the standard cone to fit. Please specify Standard or Offset when ordering.
