

Leaky Pipe Watering Systems

The 'Leaky Pipe' garden watering system is a simple and very adaptable method of providing effective irrigation with efficient use of water. Once installed, the system will be hidden from view and the plants will establish faster.

The system comprises of a network of 'Leaky Pipe' where the irrigation is needed (for example along a hedgerow or newly planted border) linked together by plastic non-leaky pipe (header pipe) or by standard garden hose.

Typically, the 'Leaky Pipe' hose will be laid on or just under the surface between the shrubs, trees or plants in lines about 60cm apart, and then covered with a mulch (eg bark). The network is connected to the water supply with a standard ½ inch garden hose.

Leaky Pipe – for areas to be irrigated

- 50m roll x 12 mm diameter £78.00
- 100m roll x 12 mm diameter £126.00

Plastic LDPE Pipe – for connecting up the sections of Leaky Pipe

- 100m roll x 16mm diameter £84.00

Fittings to connect Leaky Pipe (12mm) to plastic pipe (16mm)

- Selection of 10 mixed fittings £9.60
- Selection of 25 mixed fittings £21.60

Connectors to join garden hose to either Leaky Pipe or Plastic Pipe. Both are available as either T-connections or straight through.

- For leaky pipe connection T or straight both £3.60 each
- For plastic pipe connection T or straight both £3.60 each
